DETAILED ACTION

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all 1. obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 2, and 5-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Furukawa (6,569,603) in view of Arias et al (6,933,093).

Furukawa disclose a light-sensitive composition which comprises (A) a polymer having a phenyl group substituted by a vinyl group at a side chain, (B) a photopolymerization initiator and (C) a sensitizer which sensitizes the photo-polymerization initiator, or a light-sensitive composition which comprises (A') a polymer, the above-mentioned (B) and (C), and (D) a monomer having at least two phenyl groups each of which is substituted by a vinyl group in the molecule of the monomer; and a method of forming a relief image which comprises coating the light-sensitive composition as mentioned above on a support, exposing the composition by with the property to be the company of exposure or scanning exposure and developing the same to form a relief image on the support. The reference discloses in its preferred examples, a monomer meeting the limitations of the instant claim 17 (see column 9). The reference fails to teach the instantly claimed carboxylic compound." Street class 1 . ii At sensitive

Arias et al disclose a resin for a printing plate employing a stabilizing acid which is preferably benzoic acid.

Art Unit: 1752

Given the teachings of the references, t would have been obvious to one of ordinary skill in the art to prepare the material of Furukawa choosing to include the acid of Arias et al to improve the shelf life with reasonable expectation of achieving a material having high sensitivity.

Response to Arguments

- Applicant's arguments filed 11/13/2006 have been fully considered but they are not persuasive. Applicant has argued that the layer of Tutt may not be employed as the overcoat material of Oshima. Tutt has been relied upon solely for its teaching of an overcoat layer for a thermally sensitive polymeric layer, not for the entire material. Therefore, given that the overcoat is known to be employed in similar applications, it would have been obvious to one of ordinary skill in the art to employ the known overcoat of Tutt in its material.
- 4. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
